

Schnittstellenbeschreibung „MSD12“

**Befundliste je Pathologe
nach Anhang 12 Anlage 9.2. BMV-Ä/EKV**

Autor: Kooperationsgemeinschaft Mammographie

Version: 1.00
Stand: 01.09.2010

1 Einleitung

Die am Mammographie-Screening-Programm beteiligten Pathologen sind verpflichtet, eine Auflistung ihrer Befunde bezogen auf die einzelne Frau zu erstellen. Diese Auflistung muss anonymisiert bezogen auf die untersuchte Frau mindestens die in Anhang 12 Anlage 9.2. BMV-Ä/EKV sowie gemäß Anlage VI Krebsfrüherkennungs-Richtlinien aufgeführten Angaben umfassen und ist den programmverantwortlichen Ärzten aus der verwendeten Dokumentationssoftware bereitzustellen. Diese Schnittstellenbeschreibung beschreibt die Struktur und das Format der bereitzustellenden Angaben gemäß den Protokollen zur Dokumentation.

2 Dateinamen

Pro Pathologe (Element <biopsie_patho_arztid>) wird eine Datei erstellt, in der alle Fälle aufgelistet werden, an denen er Beteilt war. Der Dateiname basiert auf dem Dateinamenskonzept der EHD-Spezifikation 1.40 und setzt sich aus folgenden Angaben zusammen:

msd12	Bezeichnung der Schnittstelle
vv.vv	Version der Schnittstelle; Entspricht dem Element < version > des Header-Elements < interface >.
sender	Absender bzw. Erzeuger der Lieferung, Software. Entspricht dem EX-Attribut im Element < id > unter < provider >< organisation >
receiver	Empfänger der Lieferung. Entspricht dem Element < id > des Header-Elements < organisazion > (biopsie_patho_arztid + SE-ID)
timeframe	Gültigkeitszeitraum (YYYYMMDD-YYYYmMMdDD). Entspricht inhaltlich dem Header-Element < service_tmr >.
number	Nummer der Lieferung, wird mit „nr“ angehängt. Entspricht inhaltlich dem Header-Element < version_nbr >.

Beispiele:

msd12_2.00_MAMMASOFT_BAY01_20100901-20091231_nr1.xml

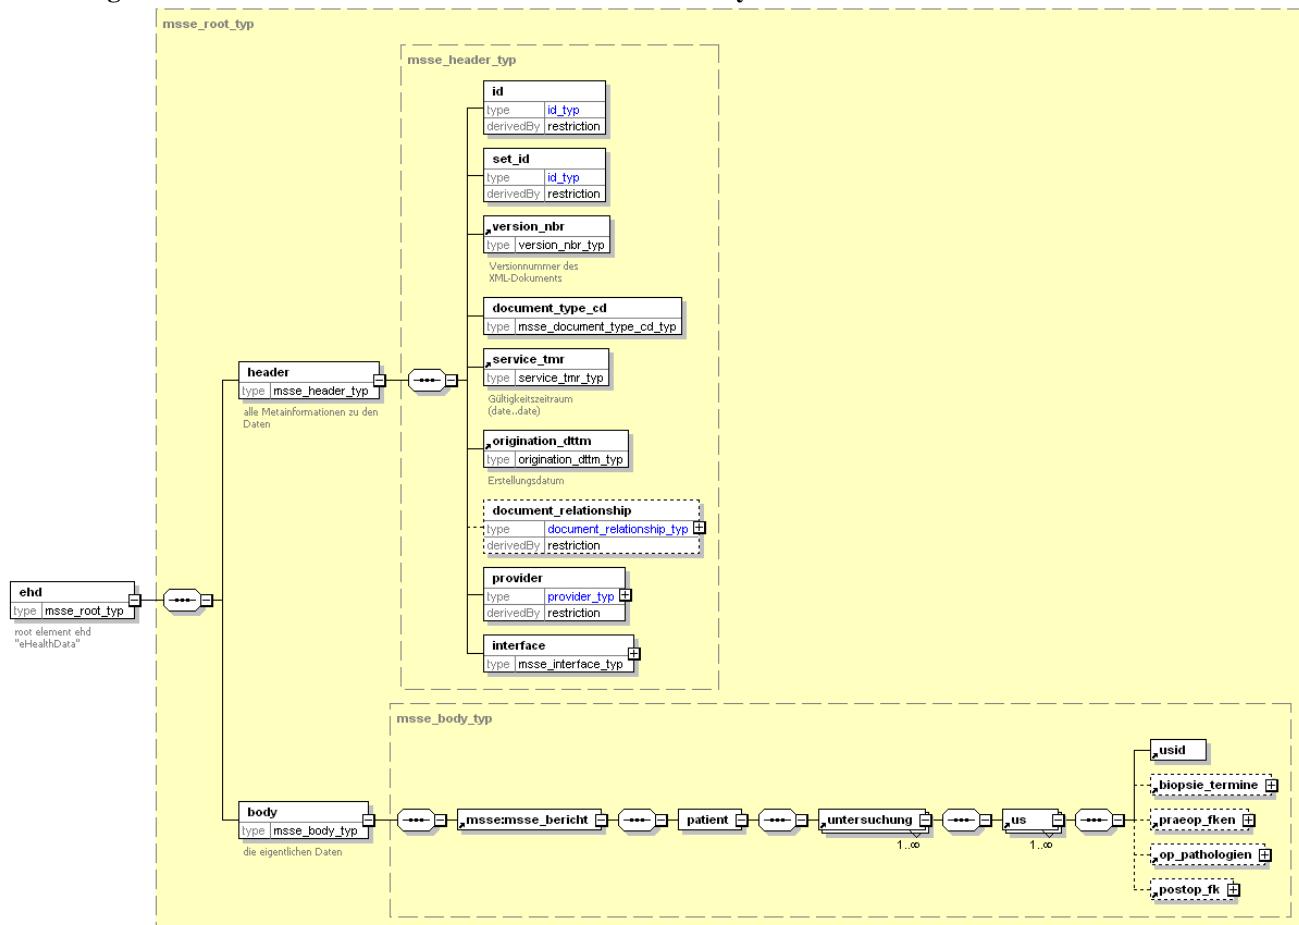

msd12_2.00_MASC_WL12_20110101-20110401_nr2.xml

3 Beschreibung der Schnittstelle nach EHD

Diese Schnittstelle basiert auf der EHD-Richtlinie V 1.40 [1], die unter <http://www.kbv.de/ita/4287.html> kostenfrei eingesehen werden kann. Grundsätzlich wird in der vorliegenden Schnittstelle zwischen header und body unterschieden.

Der header enthält sogenannte Metadaten, die für die Validierung der Datei verwendet werden. Hier wird u.a. gespeichert, wer Sender und wer Empfänger der Datenlieferung ist, wann die Datei erstellt wurde, etc. Die genaue Beschreibung der Elemente können Sie der EHD-Spezifikation entnehmen. Für diese Schnittstelle wurden die folgenden Elemente verwendet:

Abbildung 1: Oberste Hierarchieebene EHD mit header und body

Der Body enthält die für die Qualitätssicherung verwendbaren Daten aus den Screening-Einheiten, wobei die einzelnen Parameter in Form einer Baumstruktur abgelegt werden. Innerhalb des Body wurde das Element „patient“ definiert. Zu jedem Patienten können mehrere „untersuchungen“ dokumentiert werden, wobei im Rahmen dieser Schnittstelle zu jeder einzelnen Untersuchung („us“) Informationen zu Biopsietermine („biopsie_termine“), präoperativen Fallkonferenzen (praeop_fk), durchgeföhrten Pathologien (op_pathologien), (biopsie_pathologie) und postoperativen Fallkonferenzen (postop_fk) dokumentiert werden können. Die einzelnen Parameter zu diesen fünf genannten Ereignissen befinden sich unterhalb dieser Listenelemente. Die Bezeichnungen der Parameter orientieren sich an den Bezeichnungen der Protokolle zur Evaluation, konnten jedoch aus technischen Gründen

nicht 1:1 übernommen werden. Die bereitgestellte Anlage enthält eine Zuordnung der in dieser Schnittstelle verwendeten Parameterbezeichnungen zu den in den Protokollen zur Dokumentation verwendeten Parameterbezeichnungen. Genaue Vorgaben zu den einzelnen Parametern finden Sie in den Protokollen zur Dokumentation.

Folgend die detaillierte Beschreibung der einzelnen Elemente dieser Schnittstelle:

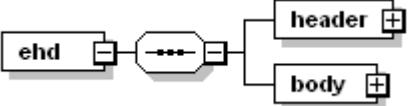

4 Schema msse_header_V1.00.xsd

complexType msse_header_typ

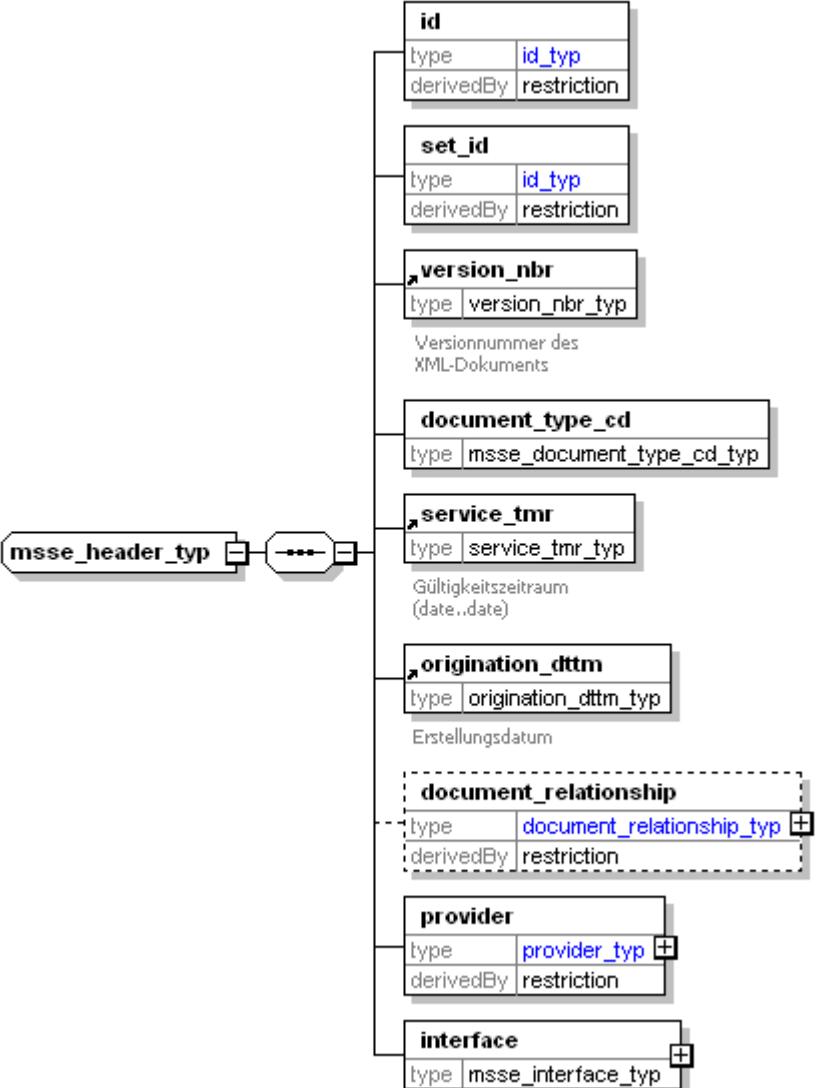

diagram	
---------	--

Der header ist die Untermenge vom header der EHD-Spezifikation. Die genaue Beschreibung der Elemente können Sie der EHD-Spezifikation entnehmen. Für diese Schnittstelle wurden die folgenden Elemente eingeschränkt:

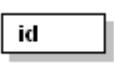

element ehd

diagram													
namespace	urn:ehd/001

	Use required
	Default
	Fixed
	annotation

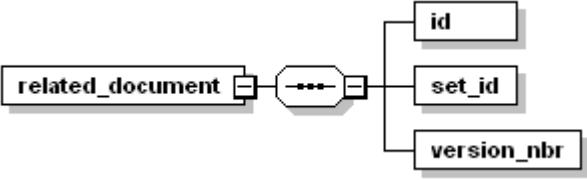

element ehd/header/document_relationship

diagram	
namespace	urn:ehd/001
properties	isRef 0 content complex
annotation	Das Element < document_relationship > beschreibt Beziehungen zu anderen Dokumenten. Im Rahmen dieser Schnittstelle wird das Element verwendet, um auf eine vorhergehende Version zu verweisen, welche durch das aktuelle Dokument ersetzt wird. Hierzu wird die Art der Beziehung und das referenzierte Dokument in den Kindelementen document_relationship.type_cd und related_document angegeben
children	document_relationship.type_cd related_document

element ehd/header/document_relationship/document_relationship.type_cd

diagram	
namespace	urn:ehd/001
properties	isRef 0 content complex
Annotation	Das Element < document_relationship.type_cd > gibt dir Art der Beziehung an. Für Ersetzungsbeziehungen ist der Wert des V-Elements mit dem Wert „RPLC“ (replace) fest belegt.
